GLOBAL MARKETS OVERVIEW

US Equities — Dow Resilient; S&P and NASDAQ Under Pressure

US equity markets closed mixed on Friday, May 16, with the Dow Jones Industrial Average edging up to 49,686 (+0.32%) even as the S&P 500 slipped marginally to 7,403 (-0.07%) and the NASDAQ fell to 26,091 (-0.51%). The session was dominated by President Trump's comments on Iran, which he stated a military strike had been cancelled, temporarily easing geopolitical risk premium in the market. However, sentiment remained cautious as the combination of persistent Middle East tensions and surging energy costs continued to exacerbate global fiscal concerns. The US 30-year Treasury yield rose to multi-decade highs, reflecting the market's anxiety over ballooning deficits — a concern that is pressuring risk assets globally.

NVIDIA (NVDA) traded at 222.32 ahead of its 1Q FY2026 earnings release, with analysts expecting record quarterly revenues of approximately $79 billion. The chipmaker's results are expected to serve as a major barometer for the broader AI investment thesis, as the company races toward a $6 trillion market capitalization milestone. SpaceX's long-awaited IPO also drew increasing attention, with reports indicating the company is eyeing a Nasdaq debut under the ticker "SPCX" on June 12, 2026, targeting a raise of approximately $75 billion at a $1.75–$2 trillion valuation. Shares of Chinese commercial rocket-related companies gained on the news as investor enthusiasm for the global space sector intensified.

Bitcoin slipped to the $77,000 level amid broader risk-off sentiment. Meanwhile, Goldman Sachs issued a report suggesting central banks are expected to step up gold purchases, which could help bullion prices recover toward year-end, providing a potential floor for precious metal valuations.

Asian Markets — Risk-Off on Brent Surge and Geopolitical Tensions

Asian equities broadly extended their decline on Monday morning as escalating Middle East tensions pushed Brent crude briefly to $110 per barrel, stoking fresh inflation fears. While most of the major Asian bourses were closed for the May 18 session (data unchanged), the PSEi registered a further decline to 5,941.52 (–0.59%), reflecting the region's continued vulnerability to oil price shocks and peso weakness. Thailand's economy notably outperformed expectations in Q1 2026, expanding 2.8% year-on-year — ahead of the 2.4% estimate — supported by export growth of 18% and higher government spending, which provided a critical buffer against the global slowdown.

PHILIPPINE MARKET STRATEGY

The PSEi closed at 5,941.52 on May 18, shedding 35.25 points (-0.59%) as selling pressures concentrated in banks, large cap property, and consumer names. Market breadth was firmly negative with 117 declines against only 65 advances. Foreign investors continued to be net sellers at PHP 225.8 million, extending the recent outflow streak. Turnover remained thin at PHP 4.05 billion, suggesting institutional hesitation ahead of key global catalysts including NVIDIA's earnings and the SpaceX IPO timeline.

Mid-cap stocks, water utilities, renewable energy, and energy distribution names outperformed the PSEi 30 index, underscoring a visible rotation away from large-cap cyclicals into domestically-anchored, cash-generative franchises. The PSEi's chief strategist maintained an opportunistic stance, identifying selective windows in infrastructure-leveraged plays, REITs offering yield support, and high-quality consumer staples. The US-Philippines partnership to develop a 4,000-acre Economic Security Zone in New Clark City, Tarlac — which is moving "very quickly" per official statements — adds a structural growth dimension for companies with real estate and logistics exposure in Central Luzon.

On the macro front, the Philippine government's appointment of Kim Robert de Leon as the new Budget Secretary signals continuity in fiscal management. De Leon, who will be the youngest cabinet member under President Marcos, is set to take his oath this week. The Bureau of the Treasury proceeded with the sale of PHP 13 billion in 91-day T-bills and PHP 13 billion in 364-day bills on May 18. The Philippine 10-year bond yield rose 6.63 basis points to 7.62% on Friday, compounding the peso's recent weakness as foreign investors reassess their Philippine fixed income positions against a backdrop of elevated US yields and oil-driven inflationary risk. The peso held at 61.641 per dollar on May 18.

CORPORATE & MARKET NEWS

GLO Globe Plans PHP 56B for AI-Driven Infrastructure in 2026

Globe Telecom, Inc. announced it is allocating PHP 56 billion this year for network upgrades, infrastructure expansion, and data center investments as it deepens the integration of artificial intelligence across its operations and enterprise services. Globe Business Marketing Head Jonathan Cristobal disclosed the figure at the BusinessWorld Economic Forum, noting that the spending includes co-investments with ST Telemedia Global Data Centres for data center infrastructure. The company is deploying AI across network operations and facilities management to optimize energy consumption and improve efficiencies at cell sites. Globe Business, the enterprise arm, is also broadening partnerships to provide AI-related solutions and accelerate enterprise adoption across Philippine industries. The commitment reflects the company's strategic pivot toward being a digital infrastructure enabler, not merely a connectivity provider. Revenue growth from AI-related services is expected to sustain spending momentum over the medium term. (BusinessWorld, May 19, 2026)

Analysis: Globe's PHP 56B capex commitment is one of the largest single-year infrastructure pledges among Philippine telecoms and signals a clear strategic differentiation from competitors. The partnership with STT GDC for data center co-investment is particularly meaningful as hyperscaler demand for Philippine data center capacity continues to grow. With the Philippines' digital economy expanding and the US-PHL AI Hub in Clark gaining traction, GLO is well-positioned as both a network provider and an enterprise AI solutions partner. At 1,803/share, Globe is trading near multi-month lows — the capex announcement could serve as a re-rating catalyst if accompanied by strong 1H26 revenue guidance.

Stance: 🟢 ACCUMULATE | GLO at current levels on AI infrastructure optionality and enterprise revenue growth trajectory.

ACEN ACEN RES Powers San Beda Alabang — Green Energy Momentum Continues

ACEN Corp., through its retail electricity arm ACEN Renewable Energy Solutions (ACEN RES), has expanded its green energy customer base with San Beda College Alabang transitioning to 100% renewable energy sourced from ACEN's diversified portfolio of solar, wind, and geothermal plants. The partnership was formalized with the unveiling of the "Powered by Renewable Energy" badge, recognizing the institution's commitment to clean energy. The arrangement is facilitated through the government's Green Energy Option Program, which allows qualified institutions to source electricity directly from a licensed RES unit. ACEN RES holds a 57% market share of the GEOP, the largest among all retail electricity suppliers. San Beda is projected to save approximately PHP 8 million annually under the new arrangement. This deal is part of ACEN's ongoing retail expansion, which reached 482 MW contracted capacity across 753 customers as of its latest reported period. (BusinessWorld, May 19, 2026)

Analysis: While ACEN's FY2025 net income contracted 60% due to offline wind assets and softer spot prices, the structural green energy retail story remains intact. ACEN RES's 57% GEOP market share is a durable competitive moat, and incremental customer additions — ranging from educational institutions to commercial buildings — provide recurring revenue visibility. The clearing of the ACEN-UPC joint venture consolidation in early 2026 expands ACEN's attributable capacity to over 7 GW across the Asia-Pacific. Accumulate ACEN on pullbacks, with a view to a mid-cycle recovery in RE spot prices and ACEN RES's continued market share dominance.

Stance: 🟢 ACCUMULATE | ACEN on RE retail moat (57% GEOP share) and capacity expansion optionality.

RLC / ACEN Robinsons Land Partners with ACMobility (Ayala) to Expand EV Charging Nationwide

Robinsons Land Corp. has signed a formal agreement with ACMobility, the mobility solutions arm of Ayala Corp., to deploy EV charging infrastructure under the GoCharge initiative across RLC's malls, offices, hotels, and residential properties nationwide. ACMobility currently operates the GoCharge network with stations in key cities and transport corridors. The partnership deploys dual 22 kW AC charge points at most hubs, enabling destination charging for mall shoppers, office workers, and residents. Initial rollout covers ten hubs across Luzon, Visayas, and Mindanao, with additional sites in Tuguegarao, Santiago, La Union, Antique, Iligan, Butuan, and Valencia planned. All stations are integrated with the Evro platform for real-time availability tracking and in-app payment. This collaboration positions Robinsons Malls as a low-carbon transport hub and forms part of ACMobility's Philippine EV Spine Network, stretching from Pagudpud in northern Luzon to Pagadian in Mindanao. (BusinessWorld, May 19, 2026)

Analysis: This partnership is value-additive for both RLC and Ayala (AC). For RLC, EV charging infrastructure enhances the mall traffic proposition and aligns with the Gokongwei group's broader sustainability narrative — increasingly important for institutional ESG capital. For Ayala, ACMobility's network expansion deepens the group's vertically integrated EV ecosystem (spanning vehicles, charging, and financing). RLC shares have been under pressure, closing at 17.88 on May 18 — an entry level that offers reasonable upside for longer-horizon property accumulation. Monitor both names for further ESG-linked catalysts.

Stance: 🟢 ACCUMULATE | RLC on valuation support and green infrastructure optionality. 🟡 MONITOR | AC for EV ecosystem development catalysts.

SMC San Miguel Signals Continued Investment Commitment Despite Global Headwinds

San Miguel Corp. reported Q1 2026 consolidated revenues rising 19% to PHP 428.3 billion, driven by higher fuel and oil volumes, energy segment growth, and steady food and beverage volumes. Consolidated operating income climbed 31% to PHP 59.6 billion. However, reported net income declined to PHP 22.5 billion from PHP 43.4 billion in the prior year period — primarily due to the absence of a PHP 21.9 billion one-time gain from a partial power asset sale recognized in Q1 2025, as well as foreign exchange losses. San Miguel Global Power recorded revenues up 26% to PHP 53.6 billion, driven partly by five BESS facilities. SMC Infrastructure delivered PHP 10.4 billion in revenues, up 7%, as average daily vehicle volumes on toll roads rose 3% to 1.1 million. Petron's net income fell 56% to PHP 1.8 billion due to refinery shutdowns in both Malaysia and the Philippines, compounded by escalating Middle East tensions. Chairman Ramon Ang emphasized the group's commitment to continued capital deployment across all business lines. (BusinessWorld, May 19, 2026)

Analysis: SMC's core operating performance in Q1 2026 was broadly solid — the 31% operating income growth and 19% revenue expansion underscore the group's inherent scale advantage across food, energy, infrastructure, and cement. The headline net income decline is primarily base-effect driven (vs. the PHP 21.9B one-time gain in Q1 2025) and forex-related, rather than reflecting deteriorating core fundamentals. The Petron situation is the key risk watch — the Port Dickson refinery remains shut and refining margins are under pressure from Middle East supply disruptions, which could persist through Q2. At the same time, SMC's BESS and toll road segments provide defensive cash flow stability. A cautiously positive medium-term view, but leverage remains elevated.

Stance: 🟡 MONITOR | SMC on balance sheet leverage and Petron refinery recovery timeline; accumulate on fundamental dips.

MEG Megaworld Widens Office Leasing Footprint Across Regional Townships

Megaworld Corp. is accelerating its regional office expansion, adding over 51,000 square meters of gross leasable area across new developments in its townships in Bulacan, Bacolod, and Davao. The expansion reflects Megaworld's strategy of integrating office, retail, and residential components in its township model to maximize recurring rental income across multiple growth regions. The company recorded a share price of PHP 2.05 as of May 18, reflecting a slight decline of 1.91% in recent trade, though leasing income expansion is expected to gradually underpin valuations. The new GLA additions align with demand from BPO companies and regional businesses seeking cost-effective alternatives to Metro Manila commercial space. Management has been consistent in pursuing geographic diversification of its portfolio as a hedge against Metro Manila rental headwinds. (BusinessWorld, May 19, 2026)

Analysis: Megaworld's regional township expansion strategy is a high-conviction secular play on Philippine urbanization and the decentralization of economic activity. The addition of 51,000 sqm across Bulacan, Bacolod, and Davao is meaningful and will gradually contribute recurring rental income, though the near-term contribution is modest relative to the full portfolio. The stock's current level of PHP 2.05 represents a historically low valuation multiple, and any improvement in REIT distribution sentiment or township pre-selling velocity could serve as re-rating catalysts. Accumulate with patience.

Stance: 🟢 ACCUMULATE | MEG on low valuation entry and regional leasing income build-up.

ABS ABS-CBN Widens Q1 2026 Net Loss to PHP 689.3M on Weaker Advertising Revenues

ABS-CBN Corp. reported a wider net loss of PHP 689.3 million in the first quarter of 2026, compared to a loss of PHP 425.7 million in the same period last year — a deterioration of approximately 62% year-on-year. Revenues contracted to PHP 3.33 billion, down 21% year-on-year, as the company continued to grapple with the structural absence of free-to-air television revenues following the non-renewal of its broadcast franchise. Basic loss per share widened to 77 centavos versus a loss of 48 centavos in Q1 2025. Gross expenses were PHP 4.05 billion versus PHP 4.63 billion last year — a sequential improvement in cost discipline — however, the reduction in expenses was insufficient to offset the steeper revenue decline. The company continues to pursue digital, cable, and streaming platforms as alternative revenue channels, but the advertising market transition remains challenging. (BusinessWorld, May 19, 2026)

Analysis: ABS-CBN's Q1 2026 results confirm that the revenue recovery narrative remains elusive without a broadcast franchise restoration. The 21% revenue decline and 62% wider net loss underscore the structural headwinds the company faces. Cost discipline improvements are a positive signal, but the gap between revenues and expenses remains large. The stock carries significant speculative risk tied to franchise-related political and regulatory outcomes. Not recommended for conservative accounts. Watch for any developments on franchise renewal or a strategic partnership that could alter the revenue base materially.

Stance: 🔴 AVOID | ABS-CBN due to structural revenue deficit, franchise uncertainty, and widening losses.

MRSGI Metro Retail Q1 2026 Profit Rises on Stronger Sales

Metro Retail Stores Group, Inc. posted Q1 2026 net sales of PHP 8.50 billion, up 9.9% year-on-year, according to a May 19 Reuters disclosure. The Gaisano-owned retailer demonstrated continued momentum from its FY2025 performance where full-year net income rose 12% to PHP 682.64 million on PHP 41.56 billion in revenues — surpassing its PHP 40 billion full-year target. Same-store sales growth reached 0.6% in 2025, and blended gross margins improved to 21.8% from 21.4%. The company expanded its footprint by opening 10 new stores across Luzon and Visayas and launched Metro Corner lifestyle stores to tap the premium urban market. Solar power systems have been installed in up to 19 stores as part of a sustainability initiative. The Q1 sales acceleration is a positive read-through on consumer spending resilience in key provincial markets. (BusinessWorld, May 19, 2026)

Analysis: MRSGI's Q1 2026 net sales growth of 9.9% outpaces the full-year 2025 sales growth rate of 4.9%, suggesting the business is accelerating into 2026. At a P/E ratio below 6x, the stock is attractively valued relative to its earnings growth trajectory. The company's presence in Visayas and Mindanao provides geographic diversification and exposure to the Philippines' fastest-growing consumption markets. The SmartWatch designation for MRSGI is warranted given the improving sales trajectory, provincial expansion pipeline, and potential for earnings upgrades. Monitor closely for Q1 2026 net income disclosure.

Stance: 🟢 ACCUMULATE | MRSGI on accelerating top-line growth, low valuation, and provincial consumption exposure.

DITO DITO CME Widens Q1 2026 Net Loss on Weaker Revenue Traction

DITO CME Holdings Corp. widened its net loss in Q1 2026 as the company continued to bear heavy finance costs, depreciation charges, and operating expenses that outpace revenue growth. For the full year 2025, DITO's annual net loss fell 7% to PHP 13.75 billion as revenues rose 26% to PHP 20.54 billion, though capital deficiency widened 36% to PHP 100 billion from PHP 73.39 billion in 2024. DITO Telecommunity added 2.48 million subscribers during the period, bringing its network coverage to 966 cities and municipalities. The company is engaged in ongoing capital talks with Singapore-based Summit Telco Corp. — a transaction cleared by the Philippine Competition Commission — which would bring in fresh equity capital in exchange for new primary shares and potentially shift control away from the Udenna Group. Management maintains a target of achieving profitability by 2028. (BusinessWorld, May 19, 2026)

Analysis: DITO CME remains a high-risk, speculative-grade investment. The PHP 100 billion capital deficiency and persistent net losses — despite improving revenue traction — reflect the structural burden of a heavily leveraged telco still in its infrastructure build-out phase. The Summit Telco deal is the critical near-term catalyst: successful completion would inject fresh capital and provide a more credible path to balance sheet rehabilitation. Until that transaction closes and the capital structure stabilizes, DITO remains unsuitable for conservative or moderate-risk portfolios. SmartWatch designation reflects our monitoring of the Summit Telco deal closure as a potential re-rating event.

Stance: 🔴 AVOID | DITO on PHP 100B capital deficiency, persistent losses, and uncertain recapitalization timeline. Watch Summit Telco deal closure.

RLC MIRA by RLC Residences Seen to Benefit from Major Quezon City Transport Projects

Analysts note that MIRA, an RLC Residences condominium development at the heart of Quezon City, stands to benefit materially from major upcoming transport infrastructure projects in the area. The MRT-7 is targeted for full operations by 2027, while the Metro Manila Subway Project is expected to commence a demonstration run by 2028 and achieve full completion by 2032. These connectivity upgrades would materially enhance MIRA's accessibility to key business districts, schools, and commercial hubs across Metro Manila. Quezon City is already home to a concentration of BPO offices, educational institutions, and retail centers that underpin rental demand. Colliers Philippines has cited the city's strong economic fundamentals as indicators of long-term competitiveness. RLC closed at PHP 17.88 on May 18. (BusinessWorld, May 19, 2026)

Analysis: MIRA is a pre-selling product that benefits from infrastructure-driven valuation uplift, which is particularly powerful in the Philippine residential market. The convergence of MRT-7 (2027) and the Metro Manila Subway (2032) at stations near MIRA's Quezon City location creates a strong infrastructure narrative that typically supports pre-selling pricing and buyer take-up rates. RLC's broader portfolio is already showing improved EV charging and sustainability features, and the MIRA pipeline adds residential earnings diversification. With RLC at 17.88 — historically low — the risk-reward favors accumulation for medium-term accounts.

Stance: 🟢 ACCUMULATE | RLC on transport infrastructure tailwinds for MIRA and low portfolio valuation.

MACRO WATCH

US–Iran Tensions: Oil at $112 Brent, Bond Yields at Multi-Decade Highs

The US-Iran conflict has fundamentally altered the near-term energy and fixed income landscape. Brent crude surged to $112.10/bbl — its highest level in years — as Middle East supply disruption fears intensified. The combination of elevated crude and mounting US fiscal deficits has pushed the US 30-year Treasury yield to its highest in two decades, forcing investors to reprice the global cost of capital. President Trump's late-week comments that a military strike on Iran was cancelled provided temporary relief, but geopolitical risk premium is unlikely to dissipate soon. Philippine inflation is particularly exposed given its oil import dependency.

US–PHL AI Hub in Clark: Strategic Infrastructure Catalyst

The US and Philippines are moving rapidly to develop a 4,000-acre Economic Security Zone in New Clark City, Tarlac, earmarked for AI infrastructure and allied strategic industries. This initiative is a significant long-term catalyst for companies with land banks, logistics, and BPO infrastructure in Central Luzon. It also reinforces the Philippine government's positioning as a trusted US technology partner, which may attract additional FDI inflows into the AI and data center segment in coming quarters.

SpaceX IPO — Global Demand for Risk Assets

SpaceX's targeting of a June 12 Nasdaq debut at a $1.75–$2 trillion valuation represents one of the most anticipated IPOs in global financial history. The listing, if successful, would signal continued investor appetite for high-growth technology assets despite elevated interest rates, and could create a positive halo effect for technology-oriented equities globally. Philippine technology-adjacent names — including GLO and DITO — may benefit from the resulting sentiment uplift, though fundamentals remain the primary investment driver.

FOREIGN TRADE FLOW — MAY 18, 2026

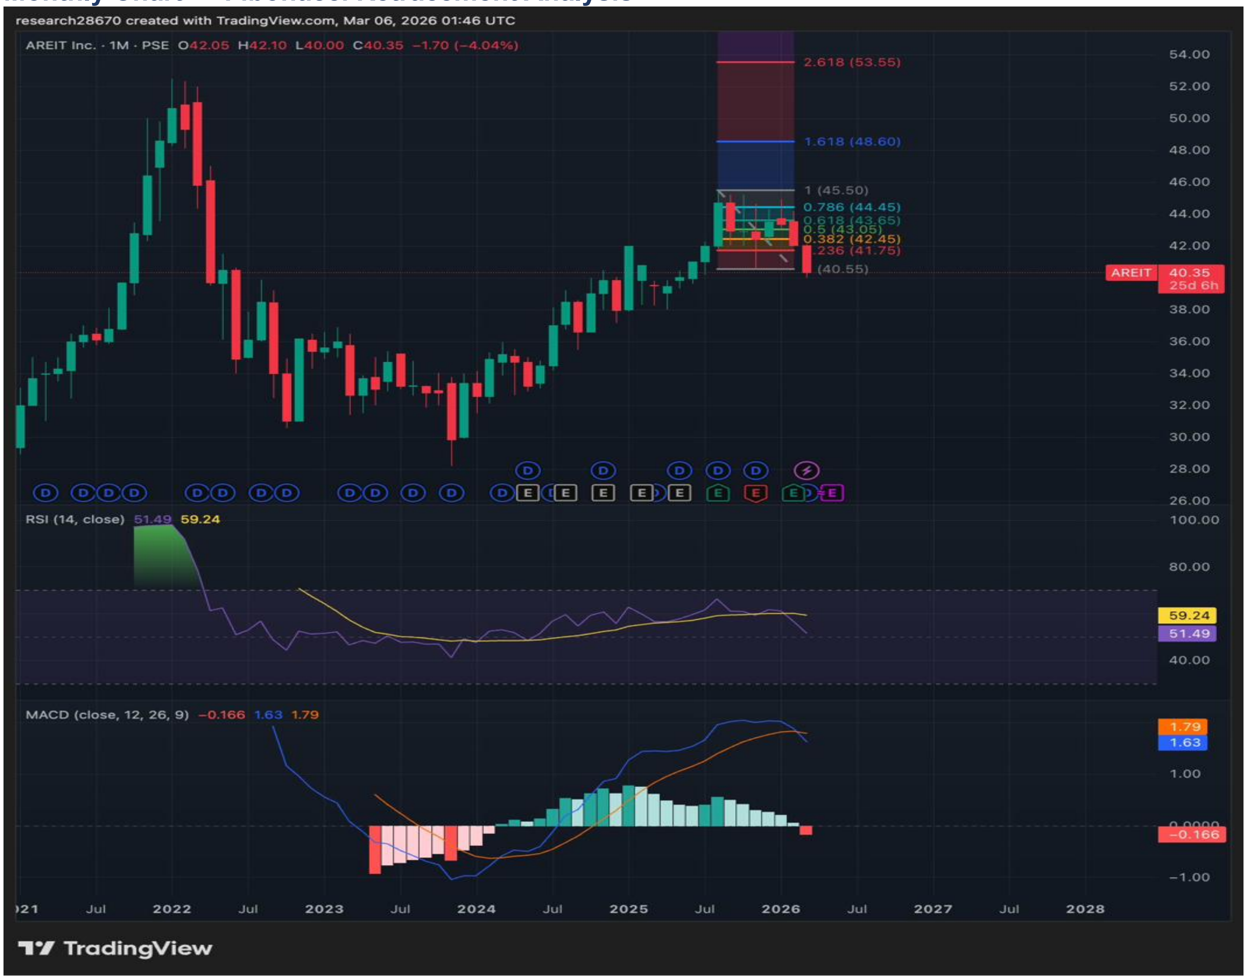
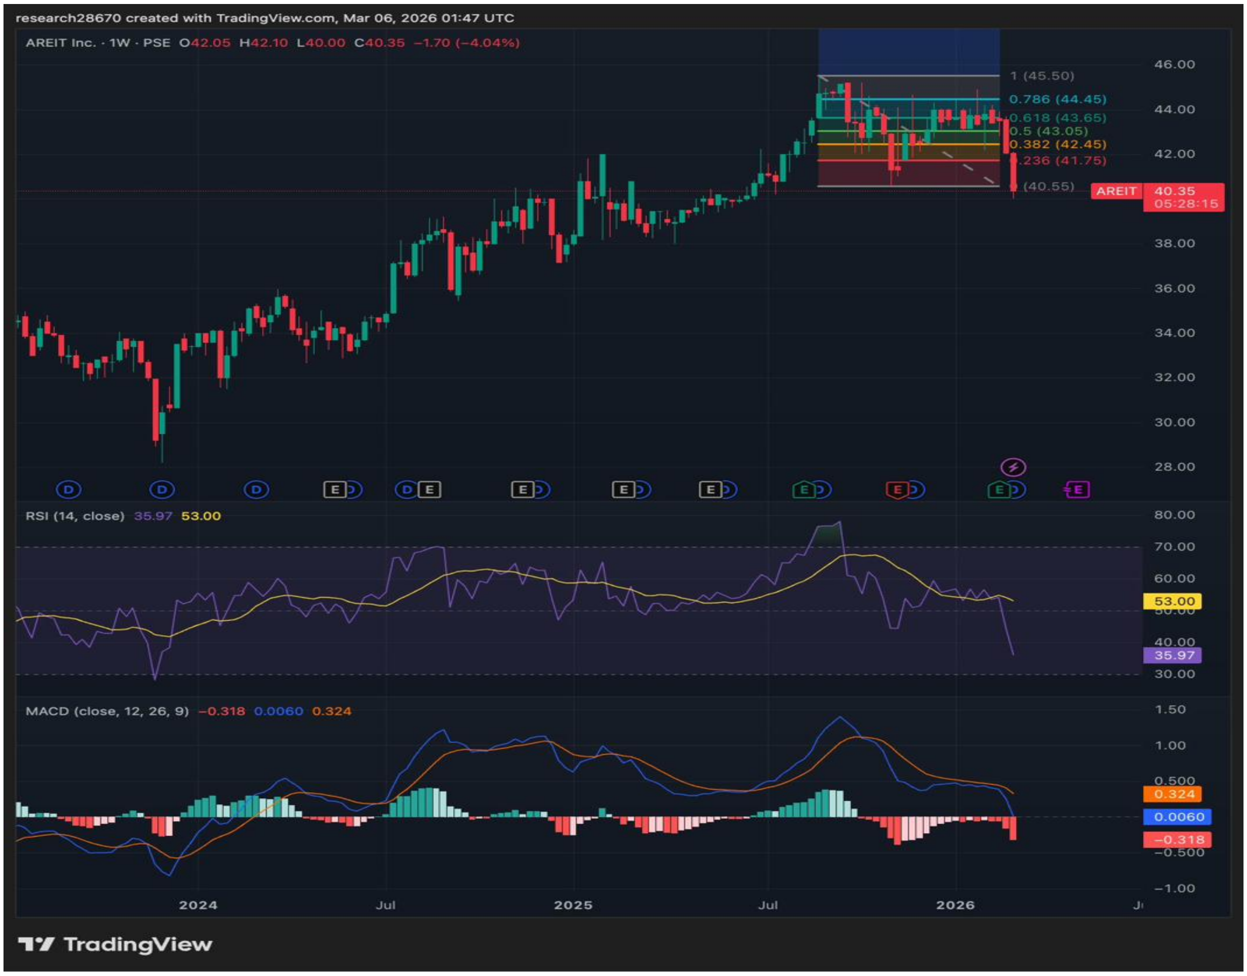
AREIT INC. — TECHNICAL ANALYSIS SPOTLIGHT

Monthly Chart — Fibonacci Retracement Analysis



On the monthly timeframe, AREIT has pulled back sharply from its prior swing highs and is now trading at approximately 39.50 — breaching below the 0.236 Fibonacci retracement level at 41.75 and approaching the critical (0) base level at 40.55. The key Fibonacci levels mapped on the monthly chart are: 2.618 extension at 53.55 (major resistance), 1.618 extension at 48.60, the 1.0 level at 45.50, followed by retracement supports at 0.786 (44.45), 0.618 (43.65), 0.5 (43.05), 0.382 (42.45), 0.236 (41.75), and the base at 40.55. The current price is testing the lower bounds of the Fibonacci structure and is approaching the (40.55) base — a level that, if breached on a monthly close, could signal a more significant corrective phase. Monthly RSI stands at 51.49 (signal line) versus a reading of 59.24, indicating continued but moderating upward momentum. The MACD shows a bearish histogram cross at -0.166, with the MACD line at 1.63 and signal at 1.79 — a sell signal that warrants caution on the monthly view.

Weekly Chart — Near-Term Support/Resistance



The weekly chart shows AREIT has pulled well below the key Fibonacci cluster between 42.45–44.45, confirming a break in the near-term bullish structure. Weekly RSI has declined to 35.97 — approaching oversold territory relative to the signal at 53.00 — and the histogram is deeply negative, with the MACD line at 0.006 and signal at 0.324. A cross back above the 0.236 level at 41.75 would be required to signal stabilization. A sustained close above 42.45 (0.382 Fibonacci) on the weekly would improve the near-term technical outlook. Current positioning: the 40.55 base serves as critical support; a weekly close below this level would open a test of the 38.00–39.00 zone. AREIT's recent +23.8% net profit growth provides strong fundamental underpinning, and the current technical weakness presents a potential entry opportunity for fundamental buyers.
DAMS Technical View: AREIT is in a technical pullback that is approaching oversold conditions on the weekly RSI (35.97). Fundamental buyers may find value entry at current levels (39.50), targeting a recovery toward the 42.45–43.65 Fibonacci cluster. The 40.55 base level is the critical support to defend on a closing basis.

SMARTWATCH — DAMS FOCUS NAMES

TICKER	NAME	PRICE	DAMS STANCE
DMC	DMCI Holdings	9.68	🟢 ACCUMULATE — diversified conglomerate, defensive income
