*Employing Intelligent Investing · Daily Pre-Market Institutional Research*
**Tuesday, 23 June 2026** Covering the PSE session of Monday, 22 June 2026

**THE CALL** **PSEi 6,035.02 ▼ 1.63% (−100.33 pts)**

The PSEi broke lower to **6,035.02 (−1.63%)**, its weakest close in the current pullback and just ~8% off the 52-week low (5,584.35), as **Services (−3.91%)** and Industrials (−1.97%) led the decline; ICT and JFC alone drove the drag. Holding Firms (+0.57%) was the lone gainer on AC/AEV/DMC/GTCAP. Foreigners sold a net **₱924.3M ($15.1M)**, lifting June net selling to ~$397.3M and YTD to ~$216.8M.

**Catalysts:** (1) PLDT files PHL's first data-center REIT — VITRO REIT, up to ₱24.2B; (2) ERC opens transmission buildout to non-NGCP players (overhang on SGP/NGCP); (3) Brent −4% on a US–Iran 60-day roadmap and a 60-day Iranian-oil license — a disinflation tailwind for the PHL.

**Where we lean — AREIT** ACCUMULATE (₱35.60 support / ₱48.06 target); **BDO, MBT** ACCUMULATE on heavy foreign buying + the rate path; **TEL** ACCUMULATE on VITRO-led deleveraging. Monitors: **SGP** (governance watch), **MEG, JGS** (trough/discipline).

## CORPORATE & SECTOR NEWS

**Stance key:** ● Accumulate/Buy ● Monitor/Neutral ● Avoid/Reduce ● Governance Watch ● Tender

### SGP ₱29.00 (intraday low ₱27.00) ERC opens transmission buildout to non-NGCP players

The Energy Regulatory Commission approved **Resolution No. 18, Series of 2026**, implementing rules that allow qualified entities other than the National Grid Corp. of the Philippines (NGCP) to finance and build DOE-designated Associated Transmission Projects and Priority Projects — lines, substations and switchyards needed to connect new generation. The framework targets chronic interconnection delays that have stranded ready-to-run plants, especially renewables. SGP, the listed parent of the consortium behind NGCP, swung as much as ~13% lower to a ₱27.00 intraday low before recovering to close ₱29.00 on a heavy ₱544M turnover (19.0M shares — a multiple of its usual thin volume). Foreign funds were small net buyers (+₱5.5M).

***Analysis.*** NGCP's franchise under RA 9511 is untouched and transmission remains a regulated business, so near-term earnings and the dividend outlook look intact; the rules carve out a regulated exception rather than ending the concession. The real read is a **long-term overhang on SGP's transmission-asset growth profile** — too early to quantify until the first designated projects, approval pace and cost-recovery terms are clear. Read-through for the desk's watch list: generation names with ATP build optionality (**AEV, AP**), and grid-linked / capex-heavy plays (**MER, GTCAP, ICT**) — all neutral pending implementation detail.

**Stance:** **● SGP — MONITOR / GOVERNANCE WATCH** Regulated base intact; structural growth overhang. Watch: AEV / AP / MER / GTCAP / ICT — **MONITOR.**

### TEL ₱1,148.00 PLDT files PHL's first data-center REIT — VITRO REIT, up to ₱24.2B

PLDT's ICT arm ePLDT filed a registration statement and REIT plan with the SEC and a PSE Main Board listing application for VITRO, to be renamed **VITRO REIT, Inc.** The offer covers up to 1.913B secondary shares plus a 286.96M over-allotment at up to ₱11.00/share, for gross proceeds of up to ₱24.2B (~$399M), implying a ~₱49B valuation and ~49% public float. The seed portfolio is eight operating data centers with ~24MW IT-ready capacity serving enterprise, cloud and hyperscale clients; the flagship 50MW Santa Rosa campus may be injected later. Proceeds flow entirely to ePLDT, earmarked largely for ~₱16.6B of Santa Rosa loan repayment plus ~₱6.7B of expansion. UBS and BPI Capital are joint global coordinators. TEL closed ₱1,148 with foreign net buying of ₱21.5M.

***Analysis.*** This is a structural value-unlock: PHL's first digital-infrastructure REIT crystallizes data-center value and recycles capital against PLDT's ~₱282B net debt, while the mandated ≥90% payout offers investors AI/digital-infra yield exposure. A successful float could also reopen a dormant local IPO pipeline. Net positive for TEL on deleveraging and sum-of-parts re-rating; constructive for the broader REIT complex (AREIT, RCR, MREIT) as a fresh yield comparable enters the market.

**Stance:** **● TEL — ACCUMULATE** Dollar-linked earnings + VITRO-led deleveraging and value crystallization. VITRO REIT — **MONITOR** the offer terms/pricing.

### JGS ₱26.10 Q1 core income −8% to ₱4.4B; group-wide austerity

JG Summit reported Q1 2026 core net income down **8% YoY to ₱4.4B** as rising fuel costs, peso depreciation and elevated rates squeezed margins, even as revenue rose 2% to ₱98.2B. Management is rolling out group-wide austerity across subsidiaries including Cebu Pacific and Universal Robina. JGS was the third most active name (₱1.07B value), included a 1.0M-share block at ₱26.11, closed ₱26.10 with foreign net buying of ₱9.8M — yet it also sits on the 52-week-low list.

***Analysis.*** The earnings miss is largely macro-driven (FX + rates + fuel) rather than operational, and the austerity push signals balance-sheet discipline. The stock is trading near trough valuations with foreign accumulation and block activity hinting at value interest. We see deep value but want a margin-stabilization catalyst (softer oil — now in play — and a peso reprieve would help) before turning constructive. URC carries the same cost-pressure read.

**Stance:** **● JGS — MONITOR** Trough earnings; deep-value with macro optionality (softer crude). URC — **MONITOR.**

## MEG ₱2.03 2026 CAPEX trimmed 15% to ₱55B; launch targets cut

Megaworld cut its 2026 capital expenditure to **₱55B from ₱65B** and lowered residential launch targets to ₱50B, framing the ~15% reduction as a disciplined-expansion strategy to manage soaring material costs, sticky inflation and elevated interest rates. MEG closed ₱2.03 with modest foreign net buying (+₱0.5M).

***Analysis.*** Capital discipline protects the balance sheet and dividend capacity through a high-rate environment, but a lighter launch pipeline tempers near-term top-line and pre-sales momentum. MEG remains inexpensive on NAV; the cut reads as prudent rather than distressed, though it removes a near-term growth catalyst.

**Stance:** **● MEG — MONITOR** Defensive capital discipline; NAV-cheap but catalyst-light near term.

## ABG ₱31.50 Approves additional capital for modular-construction unit

AsiaBest Group approved additional capital for its modular-construction subsidiary, supporting the build-out of that platform. ABG closed ₱31.50 (off a ₱32.50 open) on ₱11.5M value with foreign net buying of ₱2.9M, and appears on today's RSI-overbought screen.

***Analysis.*** The capital injection underwrites the modular-construction growth thesis, but the name is technically stretched (RSI >70) after a strong run. We would let momentum cool before adding and size positions carefully given thin float and volatility.

**Stance:** **● ABG — MONITOR** Growth optionality, but overbought — await a pullback.

## RRHI ₱47.30 Robinsons Retail taps duty-free loyalty program to widen reach

Robinsons Retail Holdings (RRHI) is leveraging a duty-free loyalty program to broaden its customer base and deepen engagement across its retail formats. RRHI closed ₱47.30 with foreign net buying of ₱2.8M. *(Note: the desk feed tagged this 'RLC'; the underlying story is Robinsons Retail / RHR, not Robinsons Land.)*

***Analysis.*** A loyalty-driven traffic and basket-size play is incrementally positive for consumer footfall and data monetization. Soft crude and any eventual easing of rates would support discretionary spend. Constructive but incremental; we keep it on the monitor list alongside PGOLD.

**Stance:** **● RRHI — MONITOR** Footprint/loyalty expansion; foreign buying. PGOLD — **MONITOR.**

## SECTOR WRAP Regulatory & sector briefs

**SEC (market makers):** A draft circular would let exchanges reward registered market makers, aiming to deepen liquidity — structurally positive for the PSE and for thinly traded names. **Property (offices):** Makati captured the bulk of early-2026 office take-up, a constructive read for Makati-centric landlords and office REITs (ALI, AREIT, RCR). **Aviation:** AirAsia will deploy its first A220 narrowbody in the PHL, sharpening short-haul competition — watch CEB. **Energy:** Mitsubishi Power signed a long-term service deal for a Batangas gas plant, supportive for gas-fired generation reliability (AP, FGEN, SMC gas). **Retail:** Analysts flag rising retail exits driven by consolidation and valuation concerns — a selectivity signal across RRHI, PGOLD and SSI.

***Analysis.*** Net-net, the regulatory backdrop tilts pro-liquidity (market makers) and pro-supply (transmission, gas servicing), while office demand concentration favors prime Makati landlords. None are single-day price catalysts, but they shape the medium-term sector setup.

**Stance:** **● Sector watch — NEUTRAL** PSE / ALI / AREIT / RCR / CEB / AP / FGEN — monitor for follow-through.

## GLOBAL Wall St mixed; oil slides on US–Iran roadmap; Starmer resigns

US markets closed Monday mixed — Dow +0.29%, S&P 500 −0.37%, Nasdaq −1.32% — with the VIX +5.4% to 17.28. Qatar and Pakistan said US and Iranian officials agreed a **roadmap toward a final deal within 60 days**, and US Treasury Secretary Bessent issued a 60-day general license permitting Iranian oil production, delivery and sale; Brent fell ~3% toward $78. SpaceX launched its first unsecured senior-note sale to refinance bridge debt, and its shares fell >16% — the worst session since its IPO. In the UK, **PM Keir Starmer resigned on 22 June** amid a Labour revolt after heavy May local-election losses, with ex-Manchester mayor Andy Burnham the runaway favorite to succeed him. Taiwan's TWSE hit a record on AI/semiconductor strength (SK Hynix all-time high; Samsung firmer on AI demand and a planned ADR listing).

***Analysis.*** The Iran de-escalation and oil-supply license are the key cross-asset signals: softer crude eases imported-inflation risk for the PHL and supports the BSP's room to eventually pause, while pressuring local oil names. AI-led gains in Taiwan/Korea underscore the global semiconductor bid that has bypassed the PSEi. UK political risk is a sentiment, not a direct PHL, factor.

**Stance:** **● Global tone — RISK-MIXED** Lower oil = PHL disinflation tailwind; AI/semis lead developed Asia.
