The Call

The tape. The PSEi rebounded 1.67% to 5,825.97 and closed at the day high. Every sector advanced, led by Services (+3.22%).

Liquidity quality. Turnover reached ₱8.76B, but ₱3.55B of block sales represented 40.6% of value. PNB Holdings (LTL) accounted for ₱2.98B of block trades and another ₱1.04B in board value.

Foreign flow. Net foreign buying was ₱2.85B, while stock-level flows were mixed: ICT led inflows; SM, AC and BPI led outflows. Treat the headline foreign bid as encouraging but transaction-distorted.

Stance. The rebound reclaimed 5,800. Hold above 5,800 to keep 5,900-5,950 in play; failure restores 5,700 as the first downside marker.

Where We Lean In

Name	Stance	Decision context
ICT P920	Accumulate on pullbacks	+P154.6M foreign inflow; US\$1B 10-year facility supports expansion funding.
AC P492	Selective accumulate	Mitsubishi deal at P650 frames strategic value; Friday foreign selling argues for staged entries.
PGOLD P40.85	Accumulate	+P28.6M foreign inflow and +2.13%; defensive earnings profile.
AREIT P36.55	Income accumulate	P17.33B infusion adds six assets; + P9.5M foreign flow despite a softer close.
SM / BPI	Monitor	Strong index rebound did not stop combined foreign selling of P239.3M.

Quality check. The 1.67% rise and positive breadth are constructive. Confirmation requires a second session above 5,800 with healthier non-block turnover and broader foreign buying.

Philippine Macro and Corporate Watch

Item	Development and market read-through
Business confidence	August confidence improved to -10.9% from -20.3% in July, but stayed negative. Next-quarter confidence rose to 24.6%: an early demand signal, not yet a full recovery.
Borrowing / debt	August gross borrowings fell 72.2% y/y to ₱141.27B, largely on base effects. The 64.9% debt-to-GDP target remains achievable, but needs stronger nominal growth and fiscal discipline.
Peso / Fed	The peso strengthened to ₱62.465 Friday. This week's expected range is ₱62.30-₱62.80 as US jobs data shapes Fed bets; oil above US\$100 remains the inflation and FX risk.
LTL / PNB	PNB Holdings is in talks for Metro Manila property acquisitions after its listing by introduction. Treat Friday's block-led liquidity separately from ordinary demand.
ACEN	ERC approved ACEN's 10-year La Union power supply deal. Positive project visibility; watch execution and returns rather than headline capacity alone.
GLO	Globe cited a 26% rise in download speed since January. Operationally positive, but the investment case still hinges on monetization and capital intensity.
AC / RLC	Ayala eased on profit-taking after the Mitsubishi deal; RLC advanced the third tower of its Parañaque project. Favor staged AC entries; treat RLC as an execution watch.

Monday Setup

US equities finished higher as oil retreated, providing a constructive external lead. Locally, improving confidence and a firmer peso help, but high crude, weak growth and block-distorted turnover argue for selective risk-taking over a broad beta chase.

Intelligent Investor Lesson

Separate price action from transaction quality. Benjamin Graham’s margin-of-safety discipline asks whether the price is below a conservatively estimated value, not merely whether the index has bounced. Friday’s rebound improved breadth and reclaimed 5,800, but block trades distorted turnover and foreign flow. Use the rally as a signal to reassess—not permission to chase: demand a valuation cushion, confirm normal-market participation and buy in stages. Portfolio Takeaway

Maintain measured risk above 5,800. Prefer ICT, AC, PGOLD and AREIT on staged entries; monitor SM and the large banks until foreign selling normalizes. A move through 5,900-5,950 on broader non-block value would strengthen the recovery case.
