Intelligent Investor Lesson

A margin of safety is the gap between estimated intrinsic value and the price paid. In a thin, foreign-led decline, lower prices alone do not create safety: the business quality, earnings durability, balance sheet and valuation must still support the estimate. For selected quality names, staged buying can reduce the risk of committing all capital at the wrong moment. The discipline is to set a valuation-based entry range, divide the intended position into tranches and stop adding if the investment thesis deteriorates. Portfolio Takeaway

Remain selective below 5,800. Favor balance-sheet strength, institutional absorption and durable income; use staged entries in AC, AREIT, FGEN and JFC. Avoid chasing mining volatility and wait for foreign selling in SM, ALI and the large banks to normalize.
